

# It Was Rocket Science®

*An Interactive Workshop for Litigators*

## WORKSHOP OUTLINE

- Learn breakthrough strategy for winning products liability litigation
- Discover new tools for proving or disproving negligence
- Find out how to quantify duty of care, standard of care and foreseeable risk
- Learn how to minimize expenses and maximize outcomes
- Apply unique lessons learned from the space program

## AVAILABLE IN CUSTOMIZED FORMATS

- One hour executive overview
- One hour lunch and learn for CLE credit
- Half day or full day public workshops using hypothetical case studies
- Half or full day in-house workshops using your actual case files

## TAKEAWAYS

- Immediately usable strategic and tactical tools for case strategy
- A wealth of anecdotal and experiential information
- A copy of Tom's 11th book; Foreseeable Risk

Tom Taormina was a member of the Mission Control Team at NASA's Johnson Space Center in Houston. He was among the first-ever Quality Control Engineers and actually heard the words: "Houston, we have a problem" first hand while on duty in Mission Control during Apollo 13.

Based on the lessons learned from Project Apollo, his work with nearly 600 companies over 40 years, and his decade as an expert witness, Tom has synthesized a new set of success tools for preventing disasters and for scientifically assessing the standard of care of defendant companies.

Forensic Business Pathology® (FBP) is a set of tools that will enable litigators to reach their desired outcomes much more rapidly, at substantially less cost and with results that are more predictable. For litigators, FBP is a strategy for assessing the standard of care of a defendant company to measurable standards and scientifically proving or disproving negligence.

FBP is equally applicable and compelling for plaintiff and defense. Those who embrace the tools will realize a competitive advantage that can only be garnered through this breakthrough approach to litigation.

***"Failure is NOT an Option" – Gene Kranz, Lead Flight Controller, Apollo 13.***
